

TABLE OF CONTENTS

Declaration	ii
Certificate	iii
Acknowledgement	iv
Preface	v
Table of contents	vi
List of figures	viii
List of tables	xii
CHAPTER 1: INTRODUCTION	1
1.1 Introduction	1
1.2 Gas Sensors	3
1.3 Conducting Polymers (CPs)	11
1.4 CPs in Gas Sensing	13
1.5 Use of Organic-Inorganic Hybrid Nanocomposites in Gas Sensing	14
1.6 PANi as a Conducting Polymer	18
1.7 Problem Statement	22
1.8 Objectives of the Research	23
1.9 Organisation of the Thesis	24
CHAPTER 2: SYNTHESIS AND CHARACTERIZATION OF CSA DOPED PANi-Ta₂O₅ NANOCOMPOSITE	26
2.1 Introduction: Synthesis process of conducting polymers	26
2.2 Experimental: Preparation of CSA doped PANi-Ta ₂ O ₅ nanocomposite	32
2.3 Characterization of CSA doped PANi-Ta ₂ O ₅ nanocomposite	34

2.4	Instrumentations used	49
2.5	Results and Discussion	49
2.6	Chapter Conclusions	58
	CHAPTER 3: FABRICATION OF CSA DOPED PANI-Ta₂O₅ NANOCOMPOSITE BASED CHEMIREISTIVE THIN-FILM SENSOR AND STUDY OF ITS NO₂ GAS SENSING BEHAVIOUR	59
3.1	Thin film deposition	59
3.2	Chemiresistive Gas Sensors and their Gas Sensing Mechanism	68
3.3	Experimental – Fabrication of CSA doped PANi-Ta ₂ O ₅ based NO ₂ gas sensor	81
3.4	Results and Discussion	83
3.5	Chapter conclusions	97
	CHAPTER 4: DEVELOPMENT OF CSA DOPED PANi-Ta₂O₅ BASED ORGANIC FIELD EFFECT TRANSISTORS FOR NO₂ GAS SENSING	98
4.1	Introduction: Organic Field Effect Transistors	98
4.2	Basic operation of an OFET	109
4.3	Experimental	115
4.4	Results and Discussion	118
4.5	Chapter conclusions	132
	CHAPTER 5: CONCLUSIONS AND FUTURE SCOPE	134
5.1	Conclusions	134
5.2	Future Scope of the Work	138

Bibliography	140
Appendix 1: Abbreviations Used	162
Appendix 2: Biodata	163
Appendix 3: Transcript of the Ph.D. course work	164
Appendix 4: List of publications	165

LIST OF FIGURES

<i>Figure No.</i>	<i>Figure Caption</i>	<i>Page No.</i>
1.1	A morning time with smoky haze in New Delhi	3
1.2	Sensor's working principle	4
1.3	General structure of a typical conductivity gas sensor	6
1.4	Schematic of a SAW sensor waveguide	7
1.5	Schematic of electrochemical sensor	8
1.6.a	Gas sensing principle of optical sensors	9
1.6.b	Simplified schematic of a NDIR optical gas sensor	10
1.7	Chemical structure of some commonly used conducting polymers	12
1.8	Oxidation states of PANi	19
1.9	Chemical structure of PANi	19
1.10	Protonation and deprotonation of PANi	20
1.11	Use of PANi based nanocomposite for gas sensing	21
2.1	SEM micrographs of different PANi nanostructures	29
2.2	Oxidation and formation of PANi	30
2.3	Photograph of PANi-ES	32
2.4.a	Schematic of SEM imaging	35
2.4.b	Schematic of TEM imaging	35
2.5	Schematic of various atomic energy levels	38

2.6.a	Geometric condition for diffraction	39
2.6.b	Diffraction cones	39
2.7	Diffraction peak and different associated information	39
2.8	The waveform of electromagnetic spectrum	40
2.9	The electromagnetic spectrum	41
2.10	An ideal UV-Vis absorption spectrum	42
2.11	Spectra of benzene	43
2.12	Various molecular orbitals in carbon compounds	44
2.13	Relative energy levels of bonding and anti-bonding molecular orbitals	45
2.14	Electronic transitions of molecular orbitals caused by UV/Visible light	45
2.15	Interferogram	47
2.16	Conversion of interferogram signal to FTIR spectrum	47
2.17	Use of spectrometer to produce FTIR spectrum	48
2.18	A simple schematic of a spectrometer	48
2.19	SEM micrographs of PANi nanocomposites	50
2.20	TEM micrograph of PANi-Ta ₂ O ₅ -CSA40% and SAED pattern	52
2.21	XRD graphs of PANi-Ta ₂ O ₅ -CSA40%	53
2.22	UV-Vis Spectra of PANi nanocomposites	55
2.23	FTIR spectra of PANi nanocomposites	56
3.1	Electrodeposition technique	60
3.2	Steps in a dip coating process	62
3.3	Various stages of spin coating	64
3.4	Molecule interaction at air-water interface	65
3.5	Components and orientation of an amphiphile molecule	65
3.6	Langmuir monolayer spread on the water surface	66
3.7	Components of a thermal evaporation system	67
3.8	Schematic representation of thermal evaporation process	68

3.9	Schematic of chemiresistive thin-film gas sensors	70
3.10	Interstitial defects	75
3.11	Possible reaction mechanism between PANi and NO ₂	77
3.12	Fabrication steps in the preparation of the PANi-Ta ₂ O ₅ -CSA based thin-film sensor	81
3.13	Schematic of the thin-film sensor for NO ₂ gas sensing	82
3.14	Schematic of in-house gas sensing setup for NO ₂ gas sensing	84
3.15	Photographs of experimental setup used for gas sensing	84
3.16	Possible formation of p-n heterostructure	87
3.17	Schematic of formation of CSA doped PANi-Ta ₂ O ₅ nanocomposite	88
3.18	Change in resistance of PANi-Ta ₂ O ₅ -CSA40% with respect to time towards 500 ppm of NO ₂ gas	90
3.19	Graphs of sensor response (%) versus NO ₂ concentration (ppm) of PANi nanocomposites	91
3.20	Dynamic response plot of PANi-Ta ₂ O ₅ -CSA40%	91
3.21	Study of response time of PANi nanocomposites	93
3.22	Study of recovery time of PANi nanocomposites	93
3.23	Effect of relative humidity of the PANi sensor	94
3.24	Selectivity study of PANi-Ta ₂ O ₅ -CSA40% based sensor	96
3.25	Stability study of the PANi-Ta ₂ O ₅ -CSA40% based sensor	96
4.1	Schematic of MOSFET and OFET	100
4.2	Schematic of a field effect transistor	102
4.3	Schematic representation of different architectures of OFETs	104
4.4	Different operation regimes of field effect transistors	111
4.5	Operating mechanism of p-type OFET	111
4.6	Energy band diagram of gate contact, insulator and the OSC of the OFET	112
4.7	Representative current-voltage characteristics of an	113

	OFET	
4.8	Working conditions of OFET and its output characteristics	114
4.9	Photograph of the spin coating machine used	116
4.10	Photograph of the plasma-enhanced chemical vapor deposition (PECVD) system	116
4.11	Photograph of BC300 High Hind Vacuum box coater	116
4.12	Schematic of the PANi-Ta ₂ O ₅ -CSA40% based OFET device	117
4.13	Photograph of the fabricated PANi-Ta ₂ O ₅ -CSA40% based OFET device	118
4.14	Output characteristics of CSA doped PANi-Ta ₂ O ₅ based OFET	119
4.15	Schematic of electrical connections of the PANi-Ta ₂ O ₅ -CSA based OFET	119
4.16	Drain-source current ($ I_{DS} $) plotted on log scale and square root of I_{DS} , ($ I_{DS} ^{1/2}$) as a function V_{GS} of CSA doped PANi-Ta ₂ O ₅ based OFET	120
4.17	Transfer curve of CSA doped PANi-Ta ₂ O ₅ based OFET reproduced showing I_{ON} , I_{OFF} , V_{TH} and SS.	122
4.18	AFM surface morphology of the CSA-PANi-Ta ₂ O ₅ layer deposited on the PMMA layer	125
4.19	In-house gas sensing setup for examining NO ₂ gas sensing properties of PANi-Ta ₂ O ₅ -CSA based OFET device	126
4.20	Output curves of PANi-Ta ₂ O ₅ -CSA based OFET to various concentrations of NO ₂	127
4.21	Percentage variation of I_{ON} of PANi-Ta ₂ O ₅ -CSA based OFET to various concentrations of NO ₂	127
4.22	Transfer curves of PANi-Ta ₂ O ₅ -CSA based OFET to various concentrations of NO ₂	128
4.23	Change in threshold voltage and carrier mobility at different concentrations of NO ₂	129
4.24	Dynamic response of PANi-Ta ₂ O ₅ -CSA based OFET	130
4.25	Selectivity study of the PANi-Ta ₂ O ₅ -CSA based OFET	130

4.26	Subthreshold swing and trap density change with NO ₂ gas concentration	132

LIST OF TABLES

<i>Table No.</i>	<i>Table Caption</i>	<i>Page No.</i>
2.1.a	Sample Details- PANi	33
2.1.b	Sample Details- PANi nanocomposites	33
2.2	The electromagnetic spectrum and the respective wavelengths	41
2.3	FTIR analysis of PANi, PANi-Ta ₂ O ₅ and CSA doped PANi-Ta ₂ O ₅	58
3.1.a	Summary of sensor response for different types of sensing material and target gas	78
3.1.b	Examples of oxidizing and reducing analytes	78
4.1	Dimensions of the PANi-Ta ₂ O ₅ -CSA40% OFET device	117
4.2	Summary of electrical properties of CSA doped PANi-Ta ₂ O ₅ OFET	124
4.3	Summary of NO ₂ gas sensing properties of PANi-Ta ₂ O ₅ -CSA based OFET	131
